The Administrator
Washington, D.C. 20201

Dear Colleague:

In connection with the Health Care Financing Administration's (HCFA) 1996 Flu Campaign, I am pleased to provide you with a summary of information on influenza immunizations paid for by the Medicare program in 1995. The Flu Campaign and this data book are part of HCFA's ongoing efforts to educate our beneficiaries and providers about appropriate use of Medicare services to improve health and prolong life. This book will help identify areas needing special outreach activities and will assist the evaluation of preceding years' efforts.

Please note that the data presented here reflect only those influenza immunizations given to Medicare beneficiaries age 65 years or older in the fee-for-service sector and for which Medicare was billed in 1995. They do not include persons enrolled in health maintenance organizations (HMOs) or other managed care settings. In addition, immunizations are not counted if provided by community-based public health programs or providers who do not bill Medicare. As a consequence, actual immunization rates may be higher than the data presented here indicate.

As was seen in 1993 and 1994, the 1995 Medicare immunization rates indicate that African American beneficiaries receive flu shots at approximately half the rate of Caucasian beneficiaries. Although HCFA data cannot yet provide accurate information about minorities other than African Americans, we are working to improve the available HCFA data on race and ethnicity. In the meantime, we will continue to collaborate with our colleagues in the Public Health Service and in State health departments to identify utilization patterns of other minority populations and to reach those underserved Medicare beneficiaries in the 1996-1997 flu season.

I would like to thank our partners throughout the Public Health Service, particularly the Centers for Disease Control and Prevention, for their support and participation. Further, I want to thank the HCFA components, especially the Regional Offices, for their efforts to promote the use of influenza immunizations. Credit also goes to the National Coalition for Adult Immunization and our other partners in the private sector who distribute information and organize influenza immunization campaigns.

Although these data show progress towards achieving the "Healthy People 2000" Goal of 60 percent influenza immunization coverage in the next four years, we still must strive to reach more beneficiaries with this important public health benefit. I welcome your interest and enthusiastic support of our 1996 and future campaigns.

Sincerely,

Bruce C. Vladeck
Administrator

1995 Influenza Immunizations Paid for by Medicare: Overview and Technical Notes

Overview

This data book contains information for the third year of claims experience since HCFA began reimbursing providers for influenza vaccine and its administration on May 1, 1993. Approximately 41 percent of Medicare beneficiaries age 65 years or older received an influenza vaccination in 1995 that was paid for by HCFA. The increase seen relative to 1994 utilization figures reflects continued progress towards attaining the Department of Health and Human Services Year 2000 goal of at least a 60 percent influenza immunization rate for all persons age 65 years or older.

The national influenza vaccination rate based on Medicare claims for African American beneficiaries is one-half the rate for Caucasian beneficiaries. Between 1994 and 1995, the rate of increase was slightly greater for African American beneficiaries than for Caucasian beneficiaries. There is no substantial variation in rates by gender. However, immunization rates are lowest for those beneficiaries 85 years and older.

Description of Tables

The data book provides national, State and county rates of influenza immunizations paid for by Medicare for elderly beneficiaries in the fee-for-service sector. Maps report rates as integers for ease of presentation. All tables contain rates reported to one tenth of one percent (one decimal place). For accuracy, the rates reported in the tables should be used in additional calculations.

Following the presentation of the national rates, the data book is organized alphabetically by State, with three (3) tables for every State. The first table provides the State's rates and numbers of influenza immunizations for both 1994 and 1995 according to age, gender, and race. The table also shows the percent increase (or decrease) in the rate of immunization for the two years compared. The percent change in rate is a ratio with the numerator equal to the difference between the rates for 1994 and 1995 and the denominator equal to the 1994 rate.

A second State table provides the number of elderly enrolled in Medicare Part B fee-for-service, as well as the number of individuals who received flu shots in 1995 according to race and county. The third State table provides corresponding immunization rates for 1994 and 1995 according to race and county. Because rates may be unstable for counties with small numbers of beneficiaries, comparisons of 1994 and 1995 county rates should be done with caution.

As in previous years, national totals reflect the experience of the 50 States and the District of Columbia. Data for Puerto Rico are provided in this book, but not included in the national totals.

Technical Notes

The 1995 rates of influenza immunizations in this volume are not directly comparable to the 1994 rates published last year. Slightly different technical specifications were used in 1995 to improve counts of influenza immunizations provided in institutional settings. In addition, reporting of Caucasian or African American races changed to reflect new information for a large number of beneficiaries previously categorized as other or unknown race.

The 1994 rates of influenza immunizations reported in this volume represent a reanalysis of the 1994 claims data according to the 1995 technical and racial specifications. Comparison of 1994 and 1995 influenza immunizations paid by Medicare should only be done using the figures reported in this volume. In virtually all instances, recalculation of 1994 state rates using 1995 methodological improvements resulted in influenza immunization rates a few percentage points higher than were reported for 1994. Comparison of "old method" 1994 rates with "new method" 1995 rates would thus overestimate the change in influenza immunization coverage.

The reassignment of individuals to either Caucasian or African American race from the other/unknown category does not affect the overall rates reported here. Similarly, reanalyses of 1994 data showed the rates for Caucasians were largely unaffected by the change. For states with small numbers of African Americans, updated information caused the 1994 African American immunization rate to fluctuate substantially. Instability in the immunization rates of African American beneficiaries may also occur at the county level because of small numbers.

Data were derived from the Medicare National Claims History File or the Common Working File using all provider and institutional outpatient claims for influenza immunizations provided between September 1 and December 31, 1995, and billed by March 31, 1996. Relative to 1994 methods, this represents an additional three months of claims processing for institutional outpatient claims. In 1993 and 1994, claims from the institutional outpatient files could only be included in the data analysis if submitted for billing prior to December 31st. Over 11 million claims were identified for the 1995 analysis.

The influenza immunization rates describe the experience of only those Medicare beneficiaries in the fee-for-service sector, as determined by their enrollment status during October 1995. As with the 1994 data, 1995 data exclude Medicare beneficiaries receiving medical care through health maintenance organizations or HMOs. HMOs do not submit claims for specific services, including flu vaccinations. In 1995, approximately 10 percent of Medicare beneficiaries were enrolled in HMOs. Between 1994 and 1995, growth in Medicare HMO enrollment exceeded that of the elderly population, so that the total number of elderly fee for service beneficiaries under Medicare declined in absolute numbers from 1994.

Rates are once again broken out according to Caucasian and African American race. Because updating of racial categories on HCFA files is incomplete, HCFA does not yet have reliable information on influenza immunizations among Hispanics, Asian/ Pacific Islanders, or Native Americans or Aleutians.

Limitations of HCFA's Data

Public health clinics, private organizations, health fairs, and some hospitals may not bill Medicare for influenza vaccinations provided to Medicare beneficiaries. Since HCFA influenza immunization rates are based on submitted claims, providers that do not bill Medicare are not represented in this data book. Although national and local efforts have been initiated to facilitate billing by such entities, the potential remains for large numbers of uncounted influenza immunization services, particularly in states or counties with significant public health and outreach activities.

As noted, these data do not include Medicare beneficiaries enrolled in HMOs or the immunizations they received. If HMO beneficiaries have higher influenza immunization rates than non-HMO enrollees, the Medicare influenza vaccination rate for all beneficiaries combined (HMO and non-HMO enrollees) would be higher than what we report for the fee-for-service sector.

Some influenza immunizations are provided in January or February during a given "flu season", or billed more than 3 months after the "flu season" has ended. These data do not capture vaccinations provided after December 31, 1995, or billed after March 31, 1996. Some large volume providers using facilitated billing procedures have missed the March 31 cutoff in previous years.

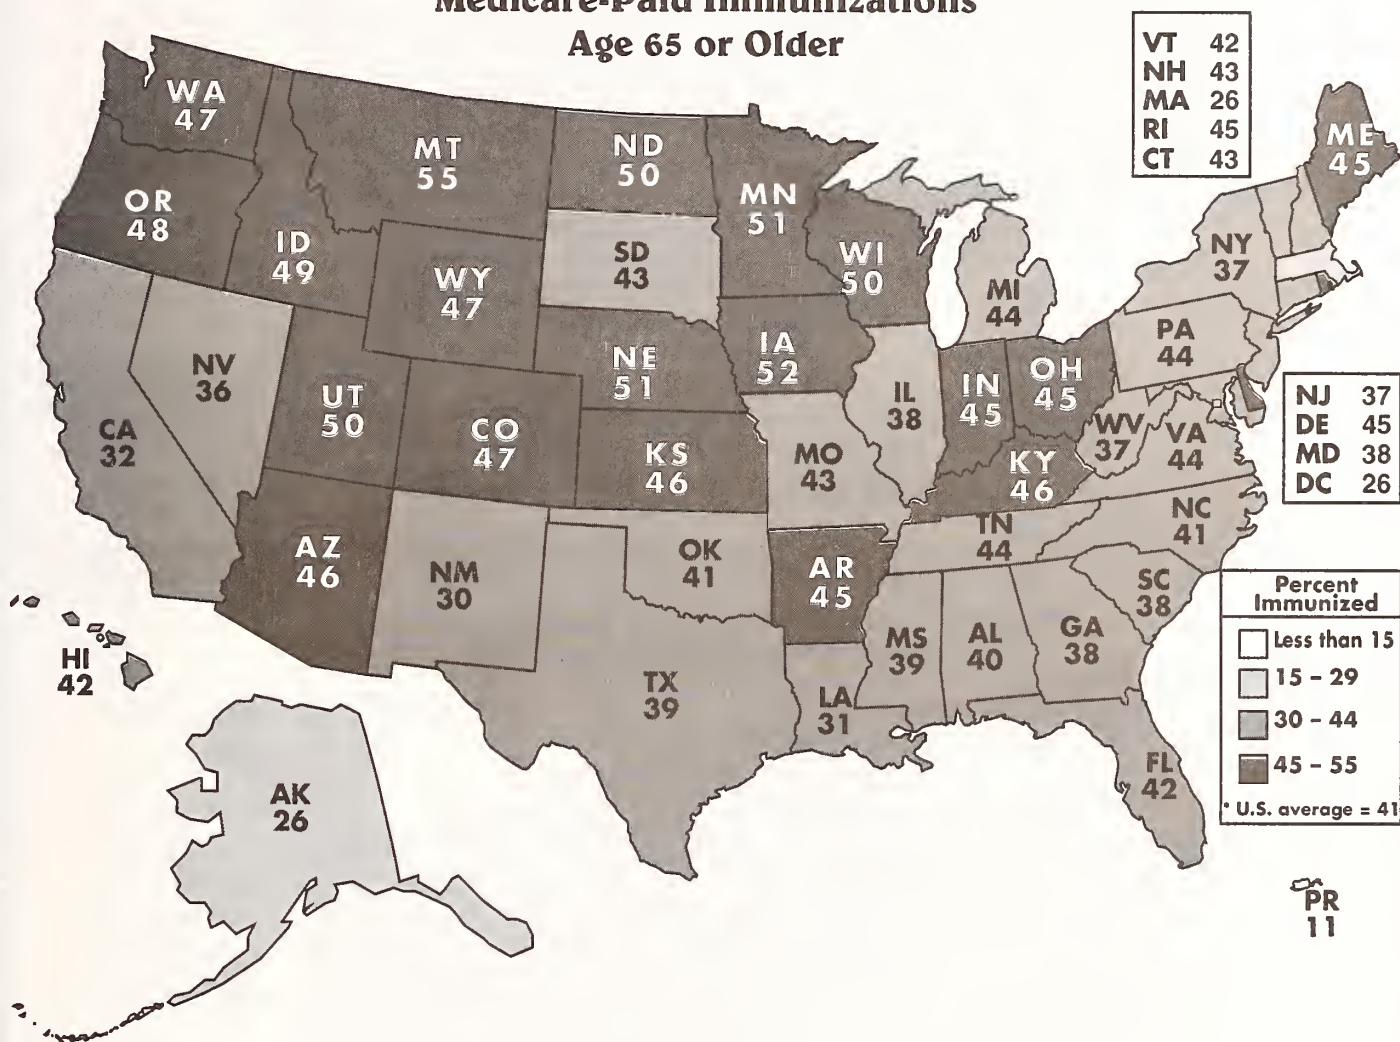

Comparisons with other Data Sources

Provisional data from the 1994 National Health Interview Survey (NHIS) indicate a higher overall influenza immunization rate for persons age 65 and older (55 percent) than HCFA data demonstrate. However, that survey does corroborate our finding of a substantially lower influenza immunization rate for African Americans. The 1994 NHIS estimates the elderly African American immunization rate to be approximately two-thirds the rate of Caucasians.

1995 INFLUENZA IMMUNIZATIONS PAID FOR BY MEDICARE

Percent of All Beneficiaries With Medicare-Paid Immunizations Age 65 or Older

These data reflect claims paid by Medicare for non-HMO beneficiaries only. Total immunization rates may be higher in those areas with free or publicly-supported programs.
